

a Varying intervention coefficient changes the model's stance | Argument: "Aliens have already visited Earth."

Oppose ($\alpha < 0$)
"...no credible scientific evidence supporting the claim... Efforts such as the SETI... have not found any convincing evidence... It's crucial to rely on verifiable information and scientific consensus when discussing topics like this."

Baseline ($\alpha = 0$)
"...there is no concrete scientific evidence or proof... UFO sightings... lack definitive proof... until such evidence is found, the claim that aliens have already visited Earth remains speculative."

Support ($\alpha > 0$)
"...supported by numerous anecdotal reports... official documents and reports that support the existence of UFOs... The scientific community generally accepts that extraterrestrial life exists... In summary, the belief... is well-supported by a variety of factors..."

d Expressed user preference shifts the initial VAA state and final verdict

Preference: User Likes: "I really like the argument." | No Preference: [empty suffix] | User Dislikes: "I really dislike the argument."

Prompts: <jim_start>user
Please comment briefly on the following argument. [Preference Suffix]
Argument: "{argument}"
Give one very brief reason, then end your response with "Final verdict: Strong" or ...<jim_end>
<jim_start>assistant ● — — Project onto VAA

Model response:
[brief reason...]
Final verdict: Strong / Weak
